

## Company commitment

In a complex, divided world with multiple risks, Coverpla's resilience, capacity for innovation and dynamism must be cultivated.

For Coverpla, the quality management system and the CSR approach are part of our overall strategy. They contribute to the sustainability of the company, ensure our development and increase our performance, our knowledge and our know-how, while respecting our values.

To promote our continuous improvement, we set ourselves the following challenges:

- ✓ **The reasoned performance of the company**, through progress in all markets and a satisfactory level of profitability
- ✓ **The development of products and services**, standard and customized, capable of meeting the trends and needs of our customers with a strong demand for sustainable development and a responsible purchasing policy
- ✓ **Confirmation of our differentiation**, through the development of our industrial facilities, our capacity for storage and the integration of new technologies and material while optimizing our environmental impact with the main objective of achieving carbon neutrality by 2025
- ✓ **The commitment to continue to promote a local, French and European sector** by promoting short circuits
- ✓ **The satisfaction of our stakeholders** (customers, partners, staff, etc.) thanks to the reliability of our products, the quality of our service and a competent and motivated team, in compliance with the rules of good governance and business ethics

The success of this commitment is everyone's business. Together we move forward. Together we innovate and succeed. This is why we are committed to providing the human, technical and organizational resources so that everyone can flourish in this process of permanent progress.
